

CHICKEN'S CLAW CRISPY CHIPS WITH DIFFERENT TASTE, FLAVOR AND SHAPE IN FOTO ESSAY. Melly Sri Sulastri Rifai. Home Economics Education Department, Faculty of Technology and Vocational Ed. Institute of Teaching and Educational Science (IKIP) Bandung. West Java. Indonesia and Indonesia Home Economics Association(IHEA).

Increase of human need to chicken as a meat or protein resources, it's mean production of chicken's claw is increasing too. Generally people are devotee of chicken's meat, but not all people are fond of chicken's claw. Some people think that chicken's claw is something wasted, but some people try to make use of them as a good food such as chicken's claw soup chicken's claw in Bamie kuah, chicken's claw in cap cay ca or kuah, etc. Fortunately chicken's claw as a material have a good and essential nutrient. Hudin (1988 : 7) told us, that per 100g chicken's claw are sources of several nutrients : fat (2.93 g), protein (44,35 g) karbohydrates or calories (0.31g), water (24.55g), cellulose or fibrous (2.5 g), dust (5.35g) and mineral : calcium (3.300mg), and phosphorus (1.720mg). The specific food nutrients is really high in chicken's claw are calcium and phosphorus. Calcium and phosphorus essential minerals. Requirements during period of growth, pregnancy and senecence. The bones and teeth contain 99 percent of calcium and 70 percent of phosphorus of the body. These elements make these tissues rigid, hence are essential for the development of these tissues and for maintaining them. Phosphorus is an important element in soft tissues as well as in hard ones.

Chicken's claw as something wastes has its benefit. The other alternative how make use of the **Chicken's claw : it is Chicken's claw Crispy Chips With Different Taste, Flavor and Shape**.
