

Luminosity Evolution of Powerful AGN

Yunyoung Choi, Jongmann Yang, and Insu Yi
CAIS and Dept. of Physics, Ewha Womans University

Optical/X-ray spectral states of massive accreting blackholes are applied to cosmological QSO luminosity evolution. We derive luminosity evolution trend in various wave bands including optical/UV and 2-10keV X-ray bands. We show QSO evolution seen at different wavelengths exhibit distinguishable and potentially observable evolution signature.
