

Two Species of Genus *Camptorhinus* Schönherr (Coleoptera: Curculionidae) New to Korea

Won, Dae Sung and Lee, Chan Young

Department of Forest Resources Protection, Kangwon National University

This paper was made to describe the morphological feature of *Camptorhinus dorsalis* (Boisduval) and *Camptorhinus dorsonigritus* Morimoto to new fauna of Korea. Two species of the genus *Camptorhinus* Schönherr, 1825 have been recorded from Korea (Illustrated Catalogue of Curculionidae in Korea, 2000).

This study was based on the specimens collected by Light Trap at the woods of *Quercus* spp. in Kangwon National University Experiment Forest from July to August, 2000.

Camptorhinus dorsalis (Boisduval) and *Camptorhinus dorsonigritus* Morimoto is separated from the following characters.

Camptorhinus dorsalis (Boisduval): Pronotum rounded laterally and convex dorsally, fore tibiae with long hairs in mail.

Camptorhinus dorsonigritus Morimoto: Fore tibiae without long hairs in mail. Pronotum shape is same in male and female.
