Accumulator Design

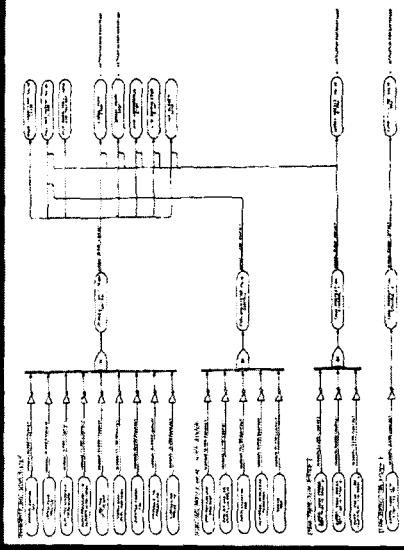

◆ Accumulator 용량산정

$$V_I = \frac{V_w}{e \cdot n \cdot F} \quad V_I = \text{Accumulator의 용적}$$

$$f = \frac{c^{1/n-1}}{A^{1/m}}$$

Accumulator Design

► ESD shore connection valve

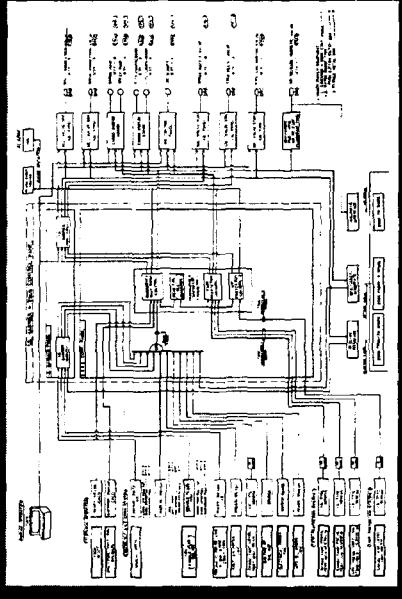

- ◆ Shore connection valve
 - ◆ Liquid line 400A x 4 set
 - ◆ Vapor line 400A x 1 set
 - ◆ Nitrogen line 80A x 1 set
 - ◆ $V_w = (6200CC \times 5 valves + 77CC \times 1 valve) \times 2 times$

$$F = \frac{Q^{1/n-1}}{A^{1/m}} = \frac{1.3^{1/1.6 - 1}}{Q^{1/1.4}} \approx 0.148$$

$$V_1 = \frac{V_{\infty}}{e \cdot n \cdot F} = \frac{6.4}{0.88 \times 0.95 \times 0.148} = 52.8$$
