

Three Undescribed Species of Formicidae in Korea

Dong-Pyeo Lyu and Yeong-Jin Chung

Division of Forest Insect Pests and Disease, Korea Forest Research Institute,
Seoul 130-172, Republic of Korea

There are 134 species of Formicidae so far known from Korea (Kim, 2000). We surveyed insect fauna of the experiment forest in Jeju-do in 2004 and found three more undescribed species in Korea: *Ponera takaminei* Terayama, *Formica hayashi* Terayama & Hashimoto and *Paratrechina yaeyamensis* Terayama. Morphological descriptions and photomicrographs of the workers are provided.
