Korean J. Plant Prot. 26(4) : 189~193(1987)

ABSTRACT Five unrecorded species of Geometridae from Korea; *Meteima mediorufa gilva*, *Idioteephria evanescens*, *I. debilitata*, *Scopula modicaria*, *Polythrena coloraria* were reported with brief redescriptions and illustration of their genitalia. And eight little known species from Korean peninsula, were listed with collected localities and the range of their distribution.

DESCRIPTION

1. *Meteima mediorufa gilva* Djakonov.

우수리가지나방(신칭)

Peteia mediorufa Bastelberger, 1911, Int.
ent. Z. 4 : 294.

Meteima gilva Djakonov, 1952, Ent. Obozr.
32 : 276~278, figs. 7~9.

Dissoplaga mediorufa; Inoue, 1986, Bull.
Fac. Domest. Sci. Otsuma Univ. 22 :
252, figs. 49~50.

Meteima mediorufa gilva; Inoue, 1987,
Japan Het. Journ. 140 : 232~235.

Wings expanse, 31~35mm. The species was described as a type species of the genus *Meteima* from S. Ussuri by Djakonov(1952), but it was treated as a subspecies of *mediorufa* Basfelberger which was described from Taiwan by Inoue(1987). According to him, the subspecies *gilva* Djakonov is distinguished from the nominate subspecies by paler ground colour of forewing, much weaker central reddish band between ante- and postmedian lines, and a longer horn-like cornutus in aedeagus. Two males were collected on May (date is uncertain) by ULV light trap. The nominate subspecies is distributed

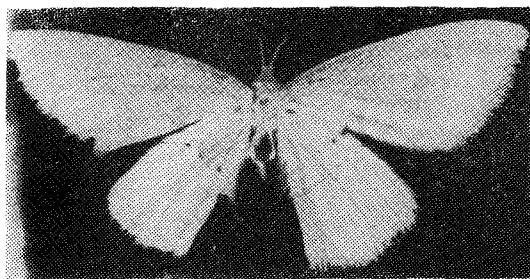

Fig. 1. *Meteima mediorufa gilva* Djakonov

in Taiwan and Japan. But Koreans is identical with the subspecies *gilva* D.

Male genitalia. As shown in figs. 3. and 4. Material examined. 2♂. Yangyang, Kangwon Prov., ? V. 1987 (K.T. Park), gen. slide no. 1598.

Distribution. Korea(new record), S.E. Siberia.

2. *Idioteephria evanescens* (Staudinger)

황갈물결자나방(신칭)

Cidaria evanescens Staudinger, 1897, Dt.
ent. Z. Iris 10 : 104.

Idioteephria evanescens; Inoue, 1982, in Inoue et al., Moths of Japan 1 : 477, 2 : 279,
pl. 69 : 4~5.

Wings expanse, 25~28mm. This species is closely similar to *I. debilitata*, but it can be distinguished from the latter by the postmedian line which strongly angled at Cu_2 on the forewing and at middle on the hindwing.

¹ College of Agriculture, Kangwon National University, Chunchon, Korea (江原大學校 農科大學)

² College of Liberal Arts and Science, Kyung Hee University, Seoul, Korea (慶熙大學校 文理科大學)

Male and female genitalia. As shown in figs. 5~7.

Material examined. 1♂, 1♀, Yangyang, Kangwŏn Prov., ? V. 1987 (K.T. Park), gen. slide no. 1601 (male) & no. 1603 (female).

Distribution. Korea(new record), Japan, S.E. Siberia.

3. *Idioteephria debilitata* (Leech) 줄겹물결자 나방(신칭)

Cidaria debilitata Leech, 1891, Entomologist 24. Suppl. : 52.

Idioteephria debilitata; Inoue, 1982, in Inoue et al., Moths of Japan 1 : 478, 2 : 279, pl. 69 : 6~8.

Wings expanse, 26~31mm. This species is the largest one among 3 species of genus *Idioteephria* known from Japan. It has been known that the larva feeds on the leaves of *Quercus* sp. in Japan.

Female genitalia. As shown in figs. 8 and 9.

Material examined. 3♀♀, Yangyang, Kangwŏn Prov., ? V. 1987 (K.T. Park), gen. slide no. 1602.

Distribution. Korea(new record), Japan, S.E. Siberia.

Host plants. *Quercus* spp. were reported from Japan.

4. *Scopula modicaria* (Leech) 각시애기자나방(신칭)

Acidalia modicaria Leech, 1897, Ann. Mag. nat. Hist. (6)20 : 94.

Acidalia virginaria Imaidzumi, 1941, Tenthredo 3 : 295.

Scopula modicaria; Inoue, 1982, in Moths of Japan 1 : 447, 2 : 271, pl. 62 : 13~16.

Wings expanse, 27mm. Very close to *S. nigropunctata* (H.) in superficial characters, but it is easily separated by the genitalic

characters, especially in male. Only one male was collected.

Male genitalia. As shown in figs. 10 and 11.

Material examined. 1♂, Yangku Kangwŏn Prov., 14. VI. 1987 (K.T. Park), gen. slide no. 1599.

Distribution. Korea (new record), Japan, China, S.E. Siberia.

5. *Polythrena coloraria* Herrich-Schäffer

노랑띠물결자나방(신칭)

Polythrena coloraria Herrich-Schäffer, 1856, Syst. Bearb. Schmett. Eur. 6 : 136 ; Prout, 1914, in Seitz, Macrolep. 4 : 169. pl. 11 : b.

This species has not been well known since it was described. A female was newly collected by sweeping at the top of Kachilbong(1,242m) and it was once listed in the list of the collection which was made in D.M.Z by the first author(1987). Recently a male also was found in the second author's collection.

Material examined, 1♀, Kachilbong, Kangwŏn Prov., 14. VI. 1987(K.T. Park) ; 1♂, Mt. Kyebang, Kangwŏn Prov., 21. VII. 1981 (Y.H. Shin)

Distribution. Korea(new record), Altai, E. Siberia.

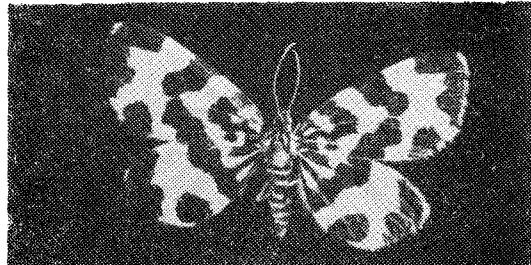

Fig. 2. *Polythrena coloraria* Herrich-Schäffer

Notes on some Little Known Species

Following species which were reported by the previous authors(Leech, 1897 and some others), but their specimens have not been

found and left in uncertainty to date, were recently collected by authors.

1. *Idaea impexa*(Butler) 노랑꼬리애기자나방
Acidalia impexa Butler, 1879, Ann. Mag. nat. Hist. (5)4 : 438.

Material examined. 1♀, Mt. Hanra, Isl. Jeju (5.VII. 1986).

Distribution. Korea, Japan, China.

2. *Idaea auricruda*(Butler) 줄굵은애기자나방
Asthenia auricruda Butler, 1879, Ann. Mag. nat. Hist. (5)4 : 438.

Acidalia plumloscriptaria Christorh, 1881, Bull. Soc. imp. Nat. Moscow 55(3) : 44.
 Material examined. 1♂ Chugog, Chunsung, Kangwön Prov., 30. VII. 1986.

Distribution. Korea, Japan, China, S.E. Siberia.

3. *Scopula confusa*(Butler) 네점애기자나방
Acidalia confusa Butler, 1878, Ann. Mag. nat. Hist. (5)1 : 400.

Material examined. 1♂ Mt. Dosol, Kangwön Prov., 14. VI. 1987.

Distribution. Korea, Japan.

4. *Scopula nigropunctata*(Hufnagel) 앞노랑애기자나방

Geometra nigropunctata Hufnagel, 1767, Berl. Mag. 4 : 526.

Material examined. 1♂ Yangku, Kangwön Prov., 14. VI. 1987, gen. slide no. 1600.

Distribution. Korea, Japan, Palaearctic region.

Remarks. Three subspecies has been known. Among these, Korean specimens belongs to *imbella*(Warren).

5. *Eramis golda* Diakonov 참나무겨울가지나방

Eramis golda Diakonov, 1929, Ent. Obozr. 23 : 107, figs 1, 2; Inoue, 1982, in Inoue

et al., Moths of Japan 1 : 552, 2 : 302, pl. 98 : 23~26, 233~12

Eramis ectroma Prout, 1930, Novit. Zool. 35 : 144.

Eramis rara Inoue, 1955, Kontyu 22 : 76, pl. 7 : 28

Material examined. Gwangrung, Gyunggi Prov., 1♂. 30. X. 1987, 2♂, 4. XI. 1987.

Distribution. Korea, Japan, S.E. Siberia

6. *Descoreba simplex* Butler 큰볏줄가지나방(신청)

Descoreba simplex Butler, 1878, Ann. Mag. nat. Hist. (5)1 : 394; Inoue, 1982, in Inoue et al., Moths of Japan 1 : 558, 2 : 304, pl. 101 : 3~6.

Aspilates violentaria Christoph, 1881, Bull. Soc. imp. Nat. Moscow. 55(3) : 82.

Descoreba punctaria Leech, 1897, Ann. Mag. nat. Hist. (6)19 : 319.

Material examined. Gwangrung, Gyunggi Prov., 4♀, 18. IV. 1987.

Distribution. Korea, Japan, S.E. Siberia

7. *Colotois pennaria ussuriensis* Bang-Haas 흰점갈색가지나방

Phalaena pennaria Linnaeus, 1761, Fauna Suecica(Ed. 2) : 324

Phalaena pennaria ussuriensis Bang-Haas, 1927, Horaemacrolepid. Reg. palaearct. 1 : 96, pl. 11 : 32; Inoue, 1982, in Inoue et al., Moths of Japan 1 : 558, 2 : 304, pl. 101 : 9~11

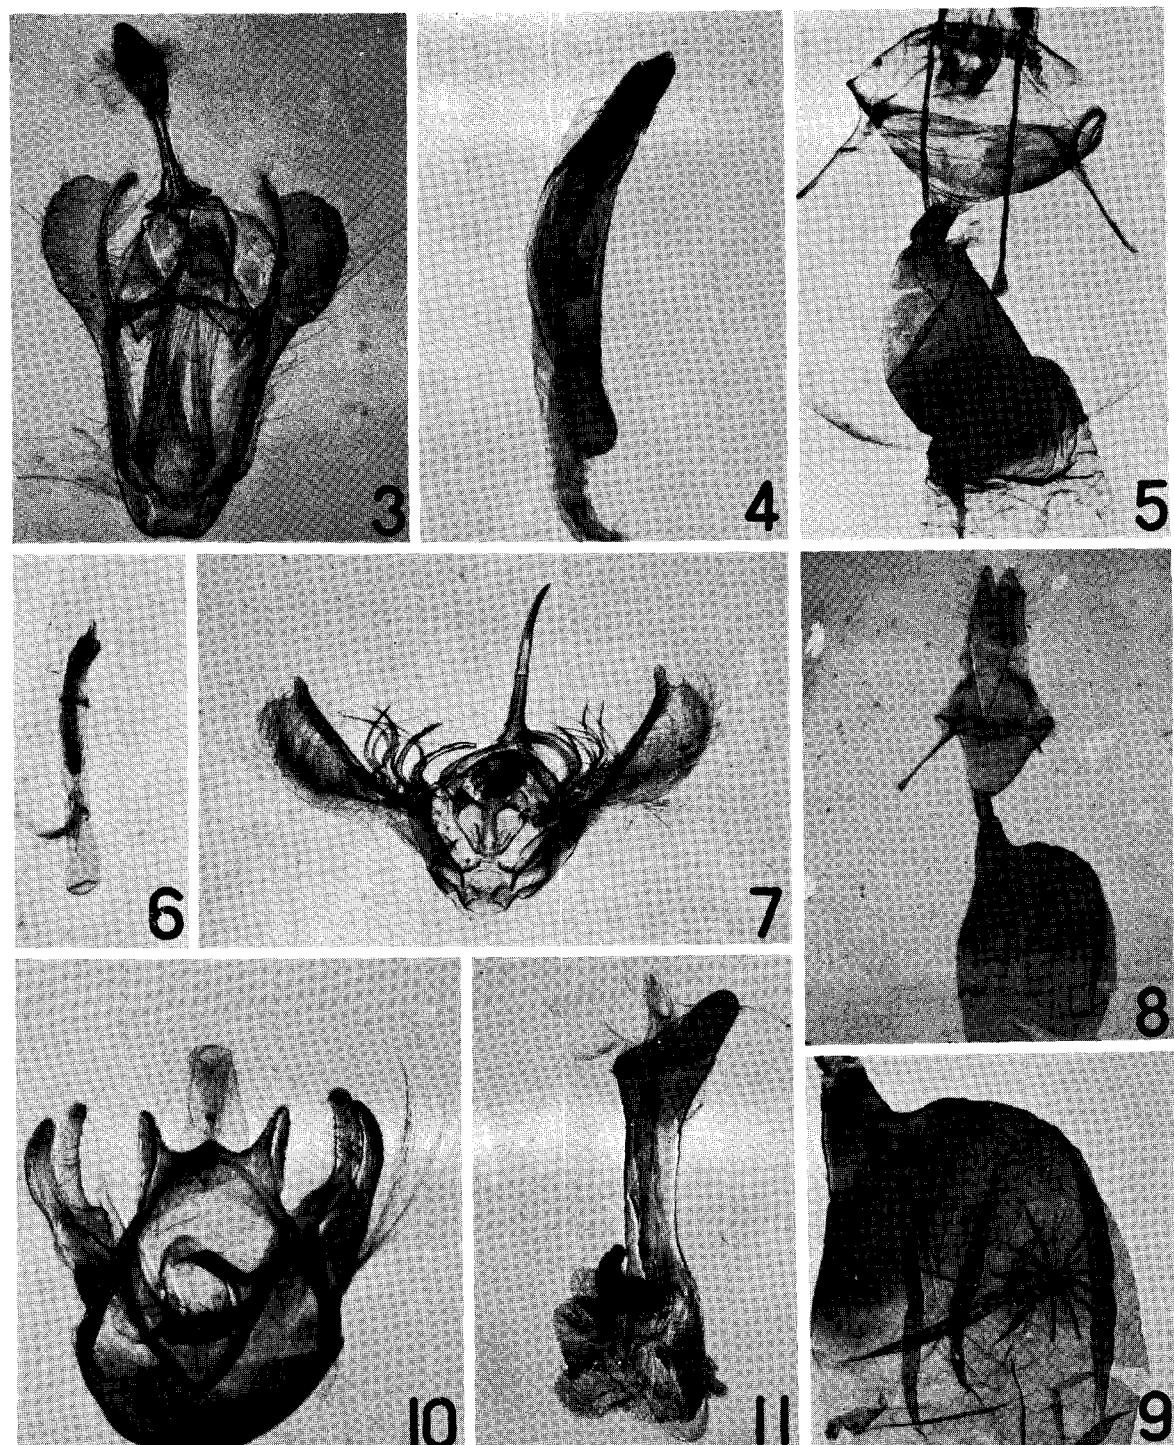

Material examined. Gwangrung, Gyunggi Prov., 1♂, 1♀, 25. X. 1986

Distribution. Korea, Japan, Siberia, Europe

8. *Pachyligia dolosa* Butler 뒷흰가지나방

Pachyligia dolosa Butler, 1878, Ann. Mag. nat. Hist. (5)1 : 442; Inoue, 1982, in Inoue et al., Moths of Japan, 1 : 557, 2 : 304, pl. 101 : 1 & 2

Material examined. Gwangrung, Gyunggi

Figs. 3. Male genitalia of *Meteima mediorufa gilva* Djakonov. 4. Ditto, aedeagus. 5. Female genitalia of *Idioteephria evanescens*(Staudinger). 6. Ditto, aedeagus. 7. Ditto, male genitalia. 8. Female genitalia of *Idioteephria debilitata*(Leech). 9. Ditto, corpus bursae with signum. 10. Male genitalia of *Scopula modicaria* (Leech). 11. Ditto, aedeagus.

Prov., 18. IV. 1987

Distribution. Korea, Japan.

摘要

자나방과의 5종 : 우수리가지나방, *Mefeima mediorufa gilva* D., 황갈물결자나방, *Idiotephria evanescens*(S.), 출점물결자나방, *I. debilitata*(L.), 각시애기자나방, *Scopula modicaria* (L.), 노랑띠각시자나방, *Polythrena coloraria* H.S 등이 우리나라에서는 처음으로 보고되었으며 그외 과거 북한 등지에서 기록되어 왔으나 표본확인이 되지 않았던 8종이 함께 채집 확인되었다.
