

BOUNDED LINEAR OPERATOR ON INTERPOLATION SPACES

DOO-HOAN JEONG AND JIN-MUN JEONG

1. Introduction

In this paper we deal with the fundamental theory of interpolation spaces between the initial Banach spaces. Let X and Y be two Banach spaces contained in a locally convex linear Hausdorff space \mathcal{X} such that the embedding mapping of both X and Y in \mathcal{X} is continuous. Let $X \cap Y$ be a dense subspace in both X and Y . The purpose this paper is made to obtain abstract interpolation theorems between X and Y , which is denoted by $(X, Y)_{\theta, p}$.

Let X_1 and Y_1 [resp. X_2 and Y_2] be two Banach spaces contained in a locally convex linear Hausdorff space \mathcal{X}_1 [resp. \mathcal{X}_2] such that the embedding mappings of both X_1 and Y_1 [both X_2 and Y_2] in \mathcal{X}_1 [resp. \mathcal{X}_2] are continuous. Let T be bounded linear operator from X_1 to X_2 and also bounded from Y_1 to Y_2 . Then we give the properties of bounded operator on interpolation spaces that is from $(X_1, Y_1)_{\theta, p}$ to $(X_2, Y_2)_{\theta, p}$.

We will treat the first point of view and determine real and complex interpolation methods. To the real methods, there are the mean methods as in Lions and Peetre [2], the K- and J-methods as in Butzer and Berens[1]. We will make easier some proofs of the equivalence of the different methods in this paper. In forth coming paper, we will deal with the complex interpolation methods.

2. Definitions

Let X and Y be two Banach spaces contained in a locally convex linear Hausdorff space \mathcal{X} such that the embedding mapping of both X and Y in \mathcal{X} is continuous. Let $X \cap Y$ be a dense subspace in both X and Y . For $1 < p < \infty$, we denote by $L_*^p(X)$ the Banach space of all functions $t \rightarrow u(t)$, $t \in (0, \infty)$ and $u(t) \in X$, for which the mapping

Received September 24, 1996.

$t \rightarrow u(t)$ is strongly measurable with respect to the measure dt/t and the norm $\|u\|_{L^p_\ast(X)}$ is finite, where

$$\|u\|_{L^p_\ast(X)} = \left\{ \int_0^\infty \|u(t)\|_X^p \frac{dt}{t} \right\}^{\frac{1}{p}}.$$

For $0 < \theta < 1$, set

$$\begin{aligned} \|t^\theta u\|_{L^p_\ast(X)} &= \left\{ \int_0^\infty \|t^\theta u(t)\|_X^p \frac{dt}{t} \right\}^{\frac{1}{p}}, \\ \|t^\theta u'\|_{L^p_\ast(Y)} &= \left\{ \int_0^\infty \|t^\theta u'(t)\|_Y^p \frac{dt}{t} \right\}^{\frac{1}{p}}. \end{aligned}$$

We now introduce a Banach space

$$V = \{u : \|t^\theta u\|_{L^p_\ast(X)} < \infty, \|t^\theta u'\|_{L^p_\ast(Y)} < \infty\}$$

with norm

$$\|u\|_V = \|t^\theta u\|_{L^p_\ast(X)} + \|t^\theta u'\|_{L^p_\ast(Y)}$$

and choose an $q \in C_0^1([0, \infty))$ satisfying $q(t) \geq 0$, $q(0) = 1$, it is easily seen that $u(0) \in \mathcal{X}$. Infact, we know

$$\begin{aligned} u(0) &= q(0)u(0) = - \int_0^\infty \frac{d}{dt}(q(t)u(t))dt \\ &= - \int_0^\infty q'(t)u(t)dt - \int_0^\infty q(t)u'(t)dt. \end{aligned}$$

By the simple calculation, from

$$\begin{aligned} \left\| \int_0^\infty q'(t)u(t)dt \right\|_X &= \left\| \int_0^\infty t^{1-\theta} q'(t) t^\theta u(t) \frac{dt}{t} \right\|_X \\ &\leq \left\{ \int_0^\infty |t^{1-\theta} q'(t)|^{p'} \frac{dt}{t} \right\}^{\frac{1}{p'}} \left\{ \int_0^\infty \|t^\theta u(t)\|_X^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &= \left\{ \int_0^\infty t^{(1-\theta)p' - 1} |q'(t)|^{p'} dt \right\}^{\frac{1}{p'}} \|t^\theta u\|_{L^p_\ast(X)} < \infty \end{aligned}$$

where $p' = p/(p - 1)$, it follows $\int_0^\infty q'(t)u(t)dt \in X \subset \mathcal{X}$. By the similiary way since

$$\begin{aligned} \|\int_0^\infty q(t)u'(t)dt\|_Y &= \|\int_0^\infty t^{1-\theta}q(t)t^\theta u'(t)\frac{dt}{t}\|_Y \\ &\leq \{\int_0^\infty |t^{1-\theta}q(t)|^{p'}\frac{dt}{t}\}^{\frac{1}{p'}} \{\int_0^\infty \|t^\theta u'(t)\|_Y^p \frac{dt}{t}\}^{\frac{1}{p}} \\ &= \{\int_0^\infty t^{(1-\theta)p'-1}|q(t)|^{p'} dt\}^{\frac{1}{p'}} \|t^\theta u'\|_{L^p_\theta(Y)} < \infty \end{aligned}$$

it follows $\int_0^\infty q(t)u'(t)dt \in Y$. Thus, $u(0) \in X \cap Y \subset \mathcal{X}$.

DEFINITION 2.1. We define $(X, Y)_{\theta,p}$, $0 < \theta < 1$, $1 \leq p \leq \infty$, to be the space of all elements $u(0)$ where $u \in V$, that is,

$$(X, Y)_{\theta,p} = \{u(0) : u \in V\}.$$

LEMMA 2.1(YOUNG'S INEQUALITY). Let $a > 0$, $b > 0$ and $\frac{1}{p} + \frac{1}{q} = 1$ where $1 < p < \infty$. Then $ab \leq \frac{a^p}{p} + \frac{b^q}{q}$

PROPOSITION 2.1. For $0 < \theta < 1$ and $1 \leq p \leq \infty$, the space $(X, Y)_{\theta,p}$ is a Banach space with the norm

$$\|a\|_{\theta,p} = \inf\{\|u\| : u \in V, \quad u(0) = a\}.$$

Furthermore, there is a constant $C_\theta > 0$ such that

$$\|a\|_{\theta,p} = C_\theta \inf\{\|t^\theta u\|_{L^p_\theta(X)}^{1-\theta} \|t^\theta u'\|_{L^p_\theta(Y)}^\theta : u(0) = a, \quad u \in V\}.$$

Proof. We only prove the last equality. For $u \in V$ satisfying $u(0) = a$, we know $\|a\|_{\theta,p} \leq \|u\|_V$. Putting

$$u_\lambda(t) = u(\lambda t), \quad \lambda > 0,$$

it holds that

$$u_\lambda \in V, \quad u_\lambda(0) = u(0) = a$$

and

$$(2.1) \quad \|a\|_{\theta,p} \leq \|u_\lambda\|_V = \|t^\theta u_\lambda\|_{L^p_*(X)} + \|t^\theta u'_\lambda\|_{L^p_*(Y)}.$$

Since

$$\begin{aligned} \|t^\theta u_\lambda\|_{L^p_*(X)} &= \left\{ \int_0^\infty \|t^\theta u_\lambda(t)\|_X^p \frac{dt}{t} \right\}^{\frac{1}{p}} = \left\{ \int_0^\infty \|t^\theta u(\lambda t)\|_X^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &= \left\{ \int_0^\infty \left\| \left(\frac{t}{\lambda}\right)^\theta u(t) \right\|_X^p \frac{dt}{t} \right\}^{\frac{1}{p}} = \lambda^{-\theta} \|t^\theta u\|_{L^p_*(X)} \end{aligned}$$

and

$$\begin{aligned} \|t^\theta u'_\lambda\|_{L^p_*(Y)} &= \left\{ \int_0^\infty \|t^\theta u'_\lambda(t)\|_Y^p \frac{dt}{t} \right\}^{\frac{1}{p}} = \left\{ \int_0^\infty \|t^\theta \lambda u'(\lambda t)\|_Y^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &= \lambda \left\{ \int_0^\infty \left\| \left(\frac{t}{\lambda}\right)^\theta u'(t) \right\|_Y^p \frac{dt}{t} \right\}^{\frac{1}{p}} = \lambda^{-\theta} \|t^\theta u'\|_{L^p_*(Y)}, \end{aligned}$$

from (2.1) it follows that

$$(2.2) \quad \begin{aligned} \|a\|_{\theta,p} &\leq \lambda^{-\theta} \|t^\theta u\|_{L^p_*(X)} + \lambda^{1-\theta} \|t^\theta u'\|_{L^p_*(Y)} \\ &= \lambda^{-\theta} A + \lambda^{1-\theta} B. \end{aligned}$$

Choosing

$$\lambda = \theta A / (1 - \theta) B,$$

(2.2) implies that

$$(2.3) \quad \begin{aligned} \|a\|_{\theta,p} &\leq \left(\frac{\theta A}{(1-\theta)B}\right)^{-\theta} A + \left(\frac{\theta A}{(1-\theta)B}\right)^{1-\theta} B \\ &= \left(\frac{\theta}{1-\theta}\right)^{-\theta} A^{1-\theta} B^\theta + \left(\frac{\theta}{1-\theta}\right)^{1-\theta} A^{1-\theta} B^\theta \\ &= \left(1 + \frac{\theta}{1-\theta}\right) \left(\frac{\theta}{1-\theta}\right)^{-\theta} A^{1-\theta} B^\theta \\ &= \frac{\theta}{1-\theta} \left(\frac{\theta}{1-\theta}\right)^{-\theta} A^{1-\theta} B^\theta \\ &= \frac{A^{1-\theta} B^\theta}{(1-\theta)^{1-\theta} \theta^\theta} = \left(\frac{A}{1-\theta}\right)^{1-\theta} \left(\frac{B}{\theta}\right)^\theta. \end{aligned}$$

By regarding as

$$a = \left(\frac{A}{1-\theta}\right)^{1-\theta}, \quad b = \left(\frac{B}{\theta}\right)^\theta, \quad p = \frac{1}{1-\theta}, \quad \text{and} \quad q = \frac{1}{\theta}$$

in Young's Lemma 2.1, from (2.3) we have

$$\|a\|_{\theta,p} \leq \frac{A^{1-\theta} B^\theta}{(1-\theta)^{1-\theta} \theta^\theta} \leq A + B,$$

that is,

$$\begin{aligned} \|a\|_{\theta,p} &\leq \frac{1}{(1-\theta)^{1-\theta} \theta^\theta} \|t^\theta u\|_{L^p_*(X)}^{1-\theta} \|t^\theta u'\|_{L^p_*(Y)} \\ &\leq \|t^\theta u\|_{L^p_*(X)} + \|t^\theta u'\|_{L^p_*(Y)}. \end{aligned}$$

For every $u \in V$ satisfying $u(0) = a$, it holds

$$\|a\|_{\theta,p} \leq C_\theta \|t^\theta u\|_{L^p_*(X)}^{1-\theta} \|t^\theta u'\|_{L^p_*(Y)}^\theta \leq \|u\|_V$$

where $C_\theta = 1/(1-\theta)^{1-\theta} \theta^\theta$. Thus we conclude that

$$\begin{aligned} \|a\|_{\theta,p} &\leq \frac{1}{(1-\theta)^{1-\theta} \theta^\theta} \|t^\theta u\|_{L^p_*(X)}^{1-\theta} \|t^\theta u'\|_{L^p_*(Y)}^\theta \\ &\leq \|t^\theta u\|_{L^p_*(X)} + \|t^\theta u'\|_{L^p_*(Y)}. \end{aligned}$$

Therefore

$$\|a\|_{\theta,p} = C_\theta \inf \{ \|t^\theta u\|_{L^p_*(X)}^{1-\theta} \|t^\theta u'\|_{L^p_*(Y)}^\theta : u(0) = a, \quad u \in V \}.$$

PROPOSITION 2.2. For $0 < \theta < 1$ and $1 \leq p \leq \infty$, we have $(X, X)_{\theta,p} = X$.

Proof. We only proof the relation $(X, X)_{\theta,p} \supset X$. Let $x \in X$ and $q \in C_0^1([0, \infty))$ satisfying $q(0) = 1$. Putting $u(t) = q(t)x$, we have $u(0) = x$. By simple calculation, since

$$\begin{aligned} \int_0^\infty \|t^\theta u(t)\|_X^p \frac{dt}{t} &= \int_0^\infty t^{\theta p-1} |q(t)|^p \|x\|_X^p dt < \infty, \\ \int_0^\infty \|t^\theta u'(t)\|_X^p \frac{dt}{t} &= \int_0^\infty t^{\theta p-1} |q'(t)|^p \|x\|_X^p dt < \infty \end{aligned}$$

we have $x \in (X, X)_{\theta,p}$.

PROPOSITION 2.3. Let $X \subset Y$ satisfying that there exists a constant $c > 0$ such that $\|u\|_Y \leq c\|u\|_X$. If $0 < \theta < \theta' < 1$ then we have

$$(X, Y)_{\theta, p} \subset (X, Y)_{\theta', p}.$$

Proof. Let $a \in (X, Y)_{\theta, p}$. then there exists $u \in V$ such that $u(0) = a$ and

$$\|t^\theta u\|_{L^p(X)} \leq \infty, \quad \|t^\theta u'\|_{L^p(Y)} \leq \infty.$$

Let $q \in C_0^1([0, \infty))$ satisfying $q(0) = 1$, $0 \leq q(t) \leq 1$ for $t \in (0, 1)$ and $q(t) = 0$ for $1 \leq t$. Putting $v(t) = q(t)u(t)$, we have

$$\begin{aligned} \|t^{\theta'} v\|_{L^p(X)} &= \left\{ \int_0^\infty (t^{\theta'} \|v(t)\|_X)^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &= \left\{ \int_0^1 (t^{\theta'} q(t) \|u(t)\|_X)^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &\leq \left\{ \int_0^1 (t^\theta \|u(t)\|_X)^p \frac{dt}{t} \right\}^{\frac{1}{p}} < \infty, \end{aligned}$$

and

$$\begin{aligned} \|t^{\theta'} v'\|_{L^p(Y)} &= \left\{ \int_0^\infty (t^{\theta'} \|q(t)u'(t) + q'(t)u(t)\|_Y)^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &\leq \left\{ \int_0^\infty (t^{\theta'} q(t) \|u'(t)\|_Y)^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &\quad + \left\{ \int_0^\infty (t^{\theta'} q'(t) \|u(t)\|_Y)^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &\leq \left\{ \int_0^\infty (t^{\theta'} \|u'(t)\|_Y)^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &\quad + \max |q'(t)| \left\{ \int_0^\infty (t^{\theta'} \|u(t)\|_Y)^p \frac{dt}{t} \right\}^{\frac{1}{p}} < \infty, \end{aligned}$$

hence we obtain that $a = v(0) \in (X, Y)_{\theta', p}$.

3. Bounded linear operators on interpolation spaces

Let X_1 and Y_1 [resp. X_2 and Y_2] be two Banach spaces contained in a locally convex linear Hausdorff space \mathcal{X}_1 [resp. \mathcal{X}_2] such that the embedding mappings of both X_1 and Y_1 [both X_2 and Y_2] in \mathcal{X}_1 [resp. \mathcal{X}_2] are continuous. Let $T : \mathcal{X}_1 \rightarrow \mathcal{X}_2$ be linear operator such that $T \in B(X_1, X_2)$ and $T \in B(Y_1, Y_2)$ where $B(X, Y)$ denotes the space of all bounded linear operators.

THEOREM 3.1. *If $T \in B(X_1, X_2) \cap B(Y_1, Y_2)$, then $T \in B((X_1, Y_1)_{\theta, p}, (X_2, Y_2)_{\theta, p})$ satisfying*

$$\|T\|_{B((X_1, Y_1)_{\theta, p}, (X_2, Y_2)_{\theta, p})} \leq \|T\|_{B(X_1, X_2)}^{1-\theta} \|T\|_{B(Y_1, Y_2)}.$$

Proof. Let $a \in (X_1, Y_1)_{\theta, p}$. Then there exists u such that $u(0) = a$ and

$$\|t^\theta u\|_{L^p(X_1)} \leq \infty, \quad \|t^\theta u'\|_{L^p(Y_1)} \leq \infty.$$

Here, we know that

$$\begin{aligned} \|t^\theta Tu\|_{L^p(X_2)} &\leq \left\{ \int_0^\infty \|t^\theta Tu(t)\|_{X_2}^p \frac{dt}{t} \right\}^{\frac{1}{p}} \\ &\leq \|T\|_{B(X_1, X_2)} \|t^\theta u\|_{L^p(X_1)} \end{aligned}$$

and

$$\|t^\theta (Tu)'\|_{L^p(Y_2)} = \|t^\theta Tu'\|_{L^p(Y_2)} \leq \|T\|_{B(Y_1, Y_2)} \|t^\theta u'\|_{L^p(Y_1)}$$

where $d/dt\{Tu(t)\} = Tu'(t)$ in distribution sense, which implies $Tu(0) = Ta \in (X_2, Y_2)_{\theta, p}$. On the other hand, from Proposition 2.1 it follows

$$\begin{aligned} \|Ta\|_{(X_2, Y_2)_{\theta, p}} &\leq C_\theta \|t^\theta Tu\|_{L^p(X_2)}^{1-\theta} \|t^\theta (Tu)'\|_{L^p(Y_2)}^\theta \\ &\leq C_\theta \|T\|_{B(X_1, X_2)}^{1-\theta} \|T\|_{B(Y_1, Y_2)}^\theta \|t^\theta u\|_{L^p(X_1)}^{1-\theta} \|t^\theta u'\|_{L^p(Y_1)}^\theta. \end{aligned}$$

Therefore, we have

$$\|Ta\|_{(X_2, Y_2)_{\theta, p}} \leq \|T\|_{B(X_1, X_2)}^{1-\theta} \|T\|_{B(Y_1, Y_2)}^\theta \|a\|_{(X_1, Y_1)_{\theta, p}}.$$

and hence the proof is complete.
