Received March 10, 2009; Revised (May 4, 2009; May 22, 2009); Accepted May 29, 2009

Abstract

The purpose of this study is to understand the Tecktonik culture and fashion, and to compare its features in Korea and France. Unlike prior studies which mainly dealt with subcultures in the U. S. and the U. K., this study paid attention to the condition of Korea. Tecktonik is a dance and music craze that originated in France in 2000, and spread worldwide via the Internet. The main features of Tecktonik fashion are slim fit, vivid colors, and high-top sneakers, which represent current fashion and culture trends, and express the feeling of Tecktonik music and dance. Compared to France, Korean Tecktonik fashion emphasizes sexual attraction of women with short skirt, while men are conservative about mohican hairstyle and dark make-up. In France, Tecktonik has become a sound social amusement, while in Korea it has been used for advertisements or entertainer's fashion style. The subcultural characteristics of Tecktonik were identified as playfulness, the active use of digital media, and high commercial value. In France where Tecktonik is for participating in a joyful dance, playfulness is prominent, and in Korea where Tecktonik acts as a visual entertainment, commercial value is outstanding. It has made differences in Tecktonik fashion of the two countries.

Key words: Tecktonik, Tecktonik fashion, Subculture; 테크토닉, 테크토닉 패션, 하위문화

I. Introduction

Music and fashion have always been inseparable ever since the emergence of pop music. Since fashion performs an important role in characterizing the music genre, it can be considered as 'visual music'. Music and fashion has affected each other, creating unique subcultural styles such as rockabilly style in the 1950s, rockers look in the 1960s, glam look in the 1970s, reggae style and punk look in the 1980s, grunge look, hip-hop style and techno style in the 1990s. Whenever a new music genre appears, a new youth culture emerges forming its unique fashion style (Kim et al., 2006).

In fashion and clothing science area, there have been many studies on the subcultural style related to music. For instance, Kim and Lee (2003) examined pop stars' fashion style from the 1950s to the 1990s, and analyzed rock style, new wave style and reggae hip-hop style in the high fashion. Sohn and Park (2005) and Kim (2002) researched subcultural punk...
style, and identified its influence on the high fashion. In addition, Chung and Guem (2005) analyzed grungy style in the street fashion, high fashion, and musician's fashion, and Kim et al. (2001) examined hip-hop fashion based on its culture. However, most prior studies mainly focused on the subcultures in the United States and the United Kingdom, and not much attention was given to the Korean youth. Also, there has not been enough study on the new subculture after hip-hop style. Only Park and Ha (2008) added emo fashion, a very recent music-related fashion to the list. Therefore, it is necessary to notice the recently emerged subcultural style, and to observe its dissemination in Korea. This study focuses on the Tecktonik culture and fashion that originated in France, in 2000. Since Tecktonik reached Korea directly from France via the Internet unlike prior subcultures, it can be a good case through which we can examine how Koreans enjoy and accept a subculture from a foreign country.

The purpose of this study is to understand the characteristics of Tecktonik culture and fashion style, and to compare its features in Korea and France. For which, following issues were focused on. First, the concept and the origin of Tecktonik was defined. Second, the way people enjoy Tecktonik and its fashion style in France and Korea were examined. And third, the subcultural features of Tecktonik in France and Korea were compared.

Since Tecktonik is a new genre emerged in 2000, there has not been an existing study on Tecktonik yet. Therefore, newspaper articles having interviews with the initiator and fans of Tecktonik were used to find its origin and features. Also, online videos made by Tecktonik fans and companies were analyzed because online video is important element of Tecktonik culture. And information on the subculture and its style was obtained from the books and papers about subculture, pop music and mass culture.

II. Definition and Origin of Tecktonik

Tecktonik, also known as ‘Tck’, is a new dance and music genre. According to Wikipedia (2008), the term came from the words ‘techno’ and ‘electronic’. Tecktonik dance is mainly distinguished by hand and arm motions. The dance moves include winding the arms around the head as if brushing and putting gel through hair, pricking the hands here and there like disco, and twining the arms together. In 2000, Tecktonik started from a party ‘Tecktonik Killer’ which was held at a nightclub in Paris, called Metropolis. The art directors of the club, Alexandre Barouzdin and Cyril Blanc, were bored by techno music, and held a new style party in which electronic music and conventional genres such as jump, techno, trance, and hard style were combined. The party was successful attracting 8,000 attendants (“Mixed dance”, 2008). Afterwards, Tecktonik was showcased in the 2007 Paris Techno Parade which is the annual dance music street festival, and received favorable responses from the public (“Tecktonik dance craze”, 2007).

Barouzdin and Blanc registered the copyright in 2002 to prevent the party name from being used by others. As a result, the dance became the first registered trademark in France, and eventually ‘Tck’ became the name of the company. The company made a contract with music publisher EMI to produce Tecktonik music CD. It has also launched a Tecktonik clothing label and a Tecktonik beverage. Furthermore, it runs a dance academy that employs official Tecktonik dancers, and a beauty salon that professionally does a special haircut for Tecktonik (“Turf war”, 2008). Tecktonik spread its explosive popularity to the whole world including the United States (“France’s Tecktonik”, 2008). This worldwide popularity resulted from the Internet. Tecktonik fans, also known as ‘Tecktoners’, videotaped their own dance steps, and posted the videos on the Web sites such as YouTube and Dailymotion. A famous Tecktonik dancer, Jey Jey’s video on YouTube was downloaded more than seven million times (“Dance of Mabbaki”, 2008). Until July 2008, around 33,800 Tecktonik videos were posted on YouTube, and the Tecktonik music album produced by EMI in 2007 was sold as many as 400,000 (“Tecktonik dance craze”, 2008). In the videos, Tecktoners were dancing in unexpected places such as street, garage, classroom etc. These exciting and funny videos made young people dance anywhere, not only in a dark club (“Mixed dance”, 2008). <Fig. 1> and <Fig. 2> show French youngsters who freely enjoy
III. Tecktonik Culture and Fashion in France and Korea

Although Tecktonik was created in France, Koreans could see how French youngsters enjoyed Tecktonik directly through the online videos. This is a unique phenomenon since most subcultures, such as punk and hippy, began in the western countries but were not transmitted to Korea successfully. Therefore, Tecktonik is a good case to compare the subculture in its birthplace and Korea.

1. Tecktonik Culture in France

In France, Tecktonik has become not a simple dance craze but a sound social amusement. Even seven-year-old girl learns a Tecktonik dance at a fitness club (Fig. 3). In an interview done by the Christian Science Monitor (“Parisian twist”, 2008), the manager of Tecktonik dance team Scorpio expressed the freedom and joy of Tecktonik. He said that Tecktonik is a dance for everyone, unlike hip-hop which is for tall and tough guys. He replied that people perform the dance mainly for enjoyment and fun. His remarks reveal that Tecktonik is open culture for the joy of everyone. Also, another Tecktoner who has danced Tecktonik every Saturday for two years in the night-club Metropolis explained the positive power of Tecktonik. According to him, Tecktonik helps people relieve the stress so that people do not need to rely on drugs or alcohol. In France, young people used to take drugs to enjoy music in the club. However, to cut the link between drugs and music, Tck Company released a beverage called Energy Drink, and youngsters began to drink it when enjoying Tecktonik (“Mixed dance”, 2008). According to another interview done by Agence France Presse (“Tecktonik dance craze”, 2007), a 15-year-old French teenager replied that he was a troublemaker who frequently went to the police station for committing crimes, but since starting to enjoy Tecktonik, he stopped doing bad things. For these reasons, parents began to support Tecktonik and believe that it is better for their children to enjoy a new fashion and dance than to hang out on the streets, commit crimes and take drugs (“Mixed dance”, 2008).

In short, Tecktonik has been accepted progressively by the French youth without any exclusion or resistance. And it has become considered as a positive social amusement even by the old generation. In France, there is no distinction between performers and audiences because Tecktonik is for participation.
of everyone.

2. Tecktonik Culture in Korea

Netizens and clubbers in Korea started to show interests in Tecktonik since the second half of 2007. In February 2008, the first Tecktonik party was held in a club, and a singer, DJ Koo officially showcased Tecktonik music and dance in summer 2008. On Korean online UCC (User Created Contents) sites appeared videos such as ‘Tecktonik dance lesson’ and ‘Tecktonik of DJ Koo’ (“Future clothes”, 2008). Unlike in France, however, Tecktonik fashion gained more attention than dance or music, while the dance was used for marketing or promoting strategy of companies.

The famous young music groups such as Bigbang or SHINee played an important role in making Tecktonik fashion popular in Korea (“Future clothes”, 2008). Although they did not pursue Tecktonik music, their fresh fashion drew attention from youngsters, by wearing Tecktonik fashion items even before Tecktonik was known to the general public in Korea. For example, Bigbang added Tecktonik style to hip-hop fashion by wearing neon color items, high-top sneakers and shutter shade sunglasses (Fig. 4)–(Fig. 5). And SHINee wore bright colored skinny pants and high-top sneakers which are main items of Tecktonik fashion (Fig. 6).

The popularity of Tecktonik fashion was revealed in sales volume. On June 2008, a Korean online shopping site Auction announced that Tecktonik fashion items ranked high among the ‘10 hot products in the first half of the year’. Among those products, the boxy T-shirts (that sold 170,000 pieces) and vivid colored skinny jeans (that sold 112,000 pairs) ranked the first and the second respectively. High-top shoes (that sold 57,000 pairs) ranked the sixth. The boxy T-shirts were popular for its vivid neon colors and unique illustrations (“Auction hot products”, 2008). The skinny jeans and high-top shoes also gained popularity for vivid colors (“10 hot products”, 2008). However, it was not until summer 2008 that the word ‘Tecktonik’ was used often by Korean media and was recognized by the public. Therefore, it is certain that consumers simply purchased Tecktonik fashion items as a mimicry of popular stars without knowing the relation between the fashion and Tecktonik.

Tecktonik dance and music began to be recognized by the public because of marketing and promotion strategies. For instance, Reebok Korea sponsored Tecktonik parties in famous clubs. In these parties, dancers and entertainers wore colorful high-top shoes of Reebok. Reebok personnel explained that upon using Tecktonik in their promotion strategy, the sales of high-top shoes in acid neon colors continued to grow, and showed more than 30% of a market share. Also, Etude House, a Korean cosmetics brand, pro-
duced the couple Tecktonik video, and posted it on online sites as a teaser advertisement. In the video, two young famous actor and actress practice Tecktonik dance, and record the scene as if Tecktoners make their own videos (Fig. 7). Many people found the video so interesting that it was downloaded more than 500,000 times (“Company is engrossed”, 2008). An advertisement for OB beer showed university students performing a Tecktonik dance in the classroom (Fig. 8). OB beer also afforded a Tecktonik dance lesson video on its homepage. In addition, a fast food franchise Lotteria used Tecktonik dance to remind consumers its new menu ‘Shake, Shake, Chicken’ (“Topic in the capital”, 2008). In the advertisement, a model performs a Tecktonik dance, grabbing a chicken in his hand. In December 2008, actress Yun-a Song showed Tecktonik dance at Korea Film Awards to celebrate the occasion as a MC of the Awards, and this event drew much attention from the audience. This was also a promotion strategy of the broadcasting station to raise program ratings.

Put it simply, Tecktonik did not settle as a subculture in Korea. Instead, its image was borrowed by main authorities such as the star system, big companies and broadcasting stations, only to be commercialized for profits. As a result, Tecktonik has become a visual entertainment in Korea.

3. Tecktonik Fashion Styles in France and Korea

This section examines the French and Korean Tecktonik fashion based on online videos, advertisements, and photos in newspaper articles and Internet materials. French Tecktonik fashion was analyzed by using videos and photos of professional dancers and amateur Tecktoners. Korean Tecktonik is led by a small number of singers and advertisements. Thus, Korean Tecktonik fashion was examined based on the fashion styles of singers and models in advertisements.

Tecktonik fashion originated from the clothes worn by French Tecktonik dancers. Its main features are slim fit, vivid colors and high-top sneakers. Tecktoners wear tops in neon colors, tight jumpers or shirts emblazoned with an eagle, and usually wear skinny pants (Fig. 1), (Fig. 10)–(Fig. 11). Eagle is the logo of Tck Company, symbolizing freedom (Fig. 9). Some females put on short pants <Fig. 12> or short...
skirts. Male Tecktoners have mohican haircut, the shaven hairstyle with only the middle part left (Fig. 13)–(Fig. 14). Tecktoners put on smoky eye make-up, or draw a star pattern around one eye (Fig. 13). Also, they tattoo on their upper bodies or arms with neon colors (Fig. 15), and wear high-top sneakers (Fig. 10), plastic-rimmed sunglasses or shutter shade sunglasses in vivid colors, and neon colored belt or armband.

As the French Tecktonik fashion was transmitted directly to Korea via the online videos, the Korean Tecktonik fashion is basically similar to the French style with skinny pants, high-top shoes and neon colors (Fig. 7), (Fig. 16). The main difference is that a star pattern around the eyes and neon colored tattoos are not used in Korea. And males do not wear mohican haircut nor dark eye make-up. Since unconventional haircuts and dark make-up for men are not easily accepted by Koreans, male entertainers wear moderate Tecktonik fashion not to provoke emotional rejection from the public. Exceptionally, a member of the music group Bigbang tried mohican haircut with dark eye make-up, which drew much attention from people (Fig. 17). But as mentioned above, he borrowed only the fashion, not pursuing Tecktonik music. So, his outstanding fashion style was not an expression
of Tecktonik spirit, but just an attempt to a new fashion style. Korean female Tecktoners tend to wear short skirts instead of skinny pants, while their vivid colored leggings or stockings emphasize sexual attraction (Fig. 8), (Fig. 18).

Tecktonik fashion was affected by diverse sources such as contemporary fashion and culture trends, Tecktonik music and dance style, and fashion style of other music genres. Slim fit is related to the skinny fashion trend of the 2000s starting with Dior Homme. Also, men’s appearance in dark make-up, bright colored clothes and tight pants reveals metro-sexual code. In addition, vivid colors represent strong mechanical feeling of Tecktonik music and dance. The use of vivid colors is effective in making someone stand out in a dance club. Neon colored accessories and slim fit clothes help dance moves look more lively and remarkable. Also, Tecktonik fashion has a revival characteristic. Dark eye shadows and mohican haircut are reminders of punk style, while neon colors, arm bands and high-top sneakers are similar features to rave style in the 1980s.

is affected by current fashion trend, culture trend, Tecktonik music and dance, and shows its difference in France and Korea.

IV. Subcultural Features of Tecktonik

The subcultural features of Tecktonik were identified as follows based on Tecktonik culture and fashion style in France and Korea.

First, Tecktonik is playful rather than resistant. Subculture has been regarded as a way of resistance against the society. For example, Hebdige (1979/1998) insisted that subculture rejects the main culture, and is opposed to predominant values and morals of the society. And according to Richards (1988), young people, who cannot fix the poverty and unemployment of the society, try to escape from the reality through symbolic expressions, and pursue a specific style constituting the subcultural identity. In this context, subcultural fashions such as the black leather jacket and worn-out pants of rockers look, dark make-up, metal chain or safety pin accessories of punk look, big baggy pants of hip-hop style, have been interpreted as anti-social messages of the youth against the old generation (Kim et al., 2006). Among popular dance musics, rave shares many features with Tecktonik but shows a difference in resistance. In the 1980s, rave developed from a warehouse party organized by young businessmen in the United Kingdom and the United States. They made a club in wide open spaces such as a warehouse, airplane hangar, and tent in a farm, which were not typical places for dancing, and people danced to the techno music in the party. In the mid 1990s, people involved in rave began to use the ecstasy, and which brought severe debates in the United Kingdom (Shuker, 1998/1999). In Tecktonik, people also dance to the electronic sound in unconventional wide open spaces. However, unlike rave, Tecktoners enjoy themselves in a sound way without drugs or alcohol. Also, Tecktonik fashion does not express anti-social feeling, instead it goes along with current fashion and culture trends. Its vivid color and outstanding haircut are not for the defiance, but for the joy by adding some elements to make the dance look more lively. Tecktonik has a contradictory nature as a subculture in that it strengthens the existing social system by relieving people from stress through sound activities.

Second, Tecktonik reflects the nature of the IT era by the active use of digital communication media. As prior subcultures originated and were enjoyed mainly in the United Kingdom and the United States, it was difficult for other countries to participate in them. And since they were transmitted in completed forms such as magazines, discs, and music videos, people who enjoyed the culture played limited roles in its development. However, as for Tecktonik, anyone can create his or her own videos and post them on the online sites. Through the Internet, people can share their own opinions and information on Tecktonik with others, so it is easy to add new elements to the craze. As a result, youngsters in various countries are recognized as star Tecktoners among netizens. Furthermore, professional dancers and amateur star Tecktoners offer online dance lesson videos, so that these open sources remove the fear of the beginners and draw more participation. Thanks to the digital media, flow of the information is fast and consumers act as prosumers.

Third, Tecktonik has high commercial value. When a subcultural style is popularized by culture industries, its original resistant or ritual meaning weakens, and the subculture is eventually integrated to the mass culture (Kim, 1994). As mentioned above, Tecktonik has become a registered trademark in France. Even if young people share information and actively participate in creating Tecktonik culture via the Internet, they cannot avoid the commercial strategy of the Tck Company that produces official Tecktonik clothes and music albums, and trains professional dancers. In other words, while the French believe that they simply enjoy the new subculture, they may actually consume commercial products. Moreover, in Korea, Tecktonik is not properly understood, and only its superficial images are consumed. When Tecktonik was searched for in Korean Web sites, it was found that on most of the online sites, where Tecktonik dance or music was supposed to be introduced, only Tecktonik clothes were on sale. Furthermore, the clothes did not show the subcultural identity of Teck-
tonik, and similar designs could be found in other online shopping sites easily. Namely, Tecktonik was used to attract people for commercial purposes. Since Tecktonik has been used as promotional strategy of companies and broadcasting stations in Korea, it has been degenerated into products, and consumed as the mass culture.

The subcultural features of Tecktonik show a difference in France and Korea. In France, Tecktonik is for participating in a joyful dance, while it acts as a visual entertainment in Korea. Therefore, playfulness is prominent in France and commercial characteristic is strong in Korea. Accordingly, fashion styles show a difference. In France where Tecktonik fashion is for enjoying the dance, there is the active use of vivid colors, dark make-up and mohican haircut in order to emphasize dance moves and liven up people in the club. On the other hand, in Korea where Tecktonik is used for product advertisement or fashion style for famous stars, hairstyle and make-up are restrained because dark make-up or unconventional hairstyle can cause emotional rejection to the consumers and audiences.

V. Conclusions

The purpose of this study is to understand the Tecktonik culture and fashion styles, and compare its features in Korea and France. Tecktonik is a dance and music genre that appeared in Paris, in 2000. In France, Tecktonik was readily accepted by the youth, and settled as a positive social amusement. However, in Korea, only its image was used for commercial purposes.

French Tecktoners wear tops in neon colors, tight jumpers or shirts with a picture of an eagle, skinny pants, high-top sneakers, mohican haircut, dark eye make-up, and star pattern drawn around one eye. They also put on plastic-rimmed sunglasses or shutter shade sunglasses in vivid colors, and neon colored tattoos, belts or armbands. Although the Korean Tecktonik fashion is basically similar to the French style, star pattern make-up, dark make-up for men, mohican haircut and neon colored tattoos are rarely used.

Subcultural features of Tecktonik can be identified as follows. First, it is playful rather than resistant. It contradicts the typical anti-social natures of a subculture in that people relieve their stress through Tecktonik and return to the society, eventually strengthening the existing systems. Second, it is a new subculture in the IT era. Information is shared rapidly via the digital communication media, which derives vast participation as prosumers from netizens worldwide. Third, it has high commercial value, which is prominent in Korea. In Korea, Tecktonik is identified as a fad and fashion style of famous people. Also, it is used as marketing tool or promotional strategy of companies and broadcasting stations, thus it has been degraded into a product. Playfulness is prominent in French Tecktonik, while commercial value is outstanding in Korea, which makes differences in Tecktonik fashion of the two countries.

This study is important in that it examines the characteristics and styles of a new subculture, considering that studies on the new subculture after the year 2000 are insufficient. And this study pays attention to how a subculture from a foreign country has been accepted in Korea. The limit of the study is that field study including actual interviews on French and Korean Tecktoners could not be done. As Tecktonik is a new subculture with short history, we should watch what direction it will develop. Also, it is necessary to conduct further studies on various new subcultures besides Tecktonik.
